Registered**

Compliant with all necessary industry
SANS codes MHA and OSHA
Requirements

MAINTENANCE

Routine maintenance scheduling is crucial to supporting the approved system design and an effective operational system. Our assigned maintenance team have been trained to take a proactive approach to system maintenance. All electronic and mechanical systems being serviced will have a checklist that will be completed which will ultimately be used to draft the final service report.

An effective maintenance schedule should ensure that:

- The system always operates as per its intended design.
- It will ensure the longevity of the electronic and mechanical equipment.
- The system is compliant as per the prescribed SANS code.
- Damaged or outdated parts/spares are replaced immediately to ensure that costly system overhauls are not needed.

If a Fire Protection system is not maintained as per the prescribed regulation the system will possibly fail in an emergency situation. This could impact on the occupational health and safety of all occupants and business assets as well as any legal undertakings and audits that could arise from accidents or insurance claims. Our tried and trusted routine and non-routine scheduling will give our clientele the peace of mind that all systems will operate in an emergency situation.

SKILLS DEVELOPMENT & LEARNING INITIATIVES

FRS skills and Development strategy will strive to contribute to sustainable development of skills, growth, development and equity by aligning our subcontractors and FRS employed resources to the skills needed for the effective delivery and implementation for our scope of work.

THE VISION

To provide and empower FRS employees as well as our appointed subcontractors with technical skills and to meet the demand and compliances of the contract.

OUR MISSION

- Providing customer directed training and capacity building courses that comply fully with national quality requirements and legislation in the fields of further education
- Enhancing the skill and competency base of clients to support and enhance sustainable economic growth and prosperity
- Provide site specific training that falls in alignment with the contractual scope of works
- Provide focused and relevant skills training programs that will add value to employee/ subcontractor and geared to client and customer satisfaction
- Ensure that all the programs, training and outcomes conforms to specified standards for the client and the scope of works
- Strive to obtain measurable and ongoing improvement in our employees and subcontractors performance output
- Design and structure training and skills programs in flexible ways which make them easily accessible and economic without compromising on quality
- Employing individuals from under developed communities is the key to this initiative

BB-BEE

Upliftment of BEE compliant subcontractors.

FRS has implemented a subcontractor program that will ensure that all our qualified, professional EME and BEE compliant companies have an opportunity to work with clients, which will assist with the long-term growth of their businesses.

FRS has drafted programs to educate and align all these approved contractors to industry best practices and regulatory standards for their respective discipline. All programs will include client compliances that fall in alignment with all SHEQ and technical requirements specific to the scope of works.

Our vetted sub-contractors would be able to utilize FRS's supplier database to ensure that their material procurement and customer pricing is always competitive. Participating suppliers have agreed to the upliftment program and extended their payment terms. This approach will assist with the subcontractors monthly cashflow which will safeguard the continuous growth of their business and ultimately contribute to the growth of our economy.
